

CONTROL UPGRADES

Give New Life to Older Duct Coil Line Machines!

with State-of-the-Art Controls

Accuracy

Reliability

Efficiency

New Features

When adding or adapting an Inline Insulation Pin Spotter or an Automatic Wrap Brake to an older Coil Line System you may want to upgrade your Micro Process Feed Controller. Older existing systems may not have features for these future upgrades.

The Ductformer Line-a-Duct DL-60 comes with either a Duro-Dyne or GripNail Pin Spotter with a programmable controller.

The Ductformer Automatic Wrap Brake DB-60 comes with a separate programmable controller.

Duro-Dyne or GripNail Pine Spotter

When installed in an older existing line the operator needs to download or enter the part size into each of the three controllers. The existing Coil Line Notch and Cut-Off System, the Pin Spotter Controller and the Wrap Brake Controller.

Ductformer can upgrade your existing Coil Line controls with the latest State-of-the-Art Micro Processor and integrate all three (3) systems into a single entry system. The operator will enter the duct size into the main controller once and all the information will be downloaded and entered into the Pin Spotter and Brake.

Upgrading the controls on your existing Duct Line will also improve the accuracy, reliability and efficiency of the system, breathing in new life and giving you years of continued service.
