Saves Time**

**Quieter and Smoother
Feed Payoff**

Eliminates Coil Damage

Ductformer offers a totally new concept in Coil Cradle Designs to make coil change-overs faster, simpler and most importantly safer.

The new one piece Mandrel Design eliminates the handling of heavy awkward coil flanges and shafts. The Tubular Mandrel eliminates excessive coil damage and the safety hazards of beating flanges and shafts into the coils. The mandrel can quickly and easily be removed from one coil and transferred into another without damaging the coil.

The Tubular Mandrel completely supports the coil and protects the inner core from damage. The mandrel is hydraulically driven and rotates on heavy duty Neoprene Rolls for a quiet, smooth, feed payoff.

Made in the U.S.A.

Coil Load Sequence

The Flush Side Design allows the lift truck easy access with no obstruction and maximum stability to remove the coil Mandrel.

Outer flange is easily removed and weighs less than 60 pounds. The Fork Truck will then retrieve the next coil.

The Mandrel is simply fed through the coil and the outer flange is slipped back onto the mandrel.

The coil and Mandrel are steady and stable allowing a one man operation to safely position the Mandrel into the Coil Stands.

Second Generation An economical upgrade from the Standard Coil Cradle System

Multiple Expanding Mandrel Decoilers

Specifications

Max Coil Weight	15,000 lbs.
Coil Widths	4' & 5'
Coil I.D.	20"
Coil O.D.	40"
Gauge Range	30 to 14 Ga.

Ductformer new concept design can be loaded with an overhead crane or fork truck. This eliminates handling of heavy dangerous and awkward coil flanges and shafts. It not only saves your load time, it's also the safest coil cradle system on the market.

Ductformer strives to provide only the latest designs and technology in Duct Fabrication.
